

## PILOT-PACK APPLICATION

### Overview

The NDSR Pilot-Pack licensing option is available to facilitate use of the NDSR software in pilot/feasibility studies. Offered at a steeply discounted price, NDSR Pilot-Pack may be used only for the pilot/feasibility study for which it is approved. With this licensing option, investigators may use up to two copies of the NDSR software for up to two years for data entry. The resulting output files are extensive, tab-delimited text files that may be analyzed using your choice of statistical analysis software. At the end of the study period, the cost of the NDSR Pilot-Pack may be credited toward the purchase of an NDSR Research license.

### Support Services

Core support services provided during the license period include installation assistance, answers to your questions, additional technical support with NCC User Support Representatives, and up to ten missing food resolutions.

### Eligibility Criteria

The NDSR Pilot-Pack licensing option is limited to use for preliminary studies conducted to serve as the basis for a larger (e.g., R01) study. Additional eligibility criteria:

1. The study must be two-years in length or less
2. The study must have a budget equal to or less than \$100,000 in direct costs per year or be funded by an NIH R21 grant mechanism.

### Application Process

Applicants should complete the attached application form and send it to [ndsrbhelp@umn.edu](mailto:ndsrbhelp@umn.edu) so that eligibility for this licensing option may be determined. A response regarding approval will be provided within two weeks.

### Pricing

Initial copy - \$2,035

Additional copy - \$1,260

**Please email** completed application to [ndsrbhelp@umn.edu](mailto:ndsrbhelp@umn.edu).
